

Appendix A: Codebook for the Subset of the 2002 General Social Survey

The General Social Survey (GSS) is a large, national probability sample of adults in the United States. It began in 1972 and continued on an almost yearly basis until 1996. In 1996, the GSS became a biannual survey and the sample size doubled from about 1,500 to nearly 3,000. Many questions are asked on each survey, while other questions are rotated from survey to survey. This subset from the 2002 GSS includes all the cases (2,765) and 74 variables.

Variable	Description of Variable
ABANY	Abortion if woman wants for any reason
ABDEFECT	Abortion if strong chance of serious defect
ABHLTH	Abortion if woman's health seriously endangered
